Legal description of well site	Quarter	Section	Township	Range	

An abandoned well is not only a threat by physical injury to people and livestock but also a direct link to ground aquifers. One of the cheapest and sure ways to secure the quality of aquifers is to seal abandoned wells. Throughout Manitoba there are thousands of abandoned wells. In the past 10 years Conservation Districts have sealed over 3,500 wells.

Type of well	Wood Crib ___ Concrete ___ Steel Casing ___ Other ___ If other specify _____
Is pump still attached	Type of pump

Diameter of well	Depth of well	Is the well artesian
------------------	---------------	----------------------

How far is well from an active well	Is the well inside a structure
-------------------------------------	--------------------------------

Has the abandoned well been replaced by the Rural Water Pipeline
--

In larger and some small diameter wells it is necessary to use clay and sand in addition to bentonite to properly seal the well. Is either of this material available close to the site (spoil for dugout etc)?

If yes please indicate where:

Would you be willing to allow Kelsey Conservation District to place a gate sign on your property indicating your participation in this project?

Draw map indicating where the abandoned well that is to be sealed is located (include house, sheds, trees or other identifying features with distances to ensure that the proper well is sealed).

Please read all conditions and responsibilities listed on the reverse side of this application.
